Editorial

Megan Johnston

Whether you actually lived through the 1950s and '60s, or just feel like you did (after a couple of decades of baby boomer nostalgia-laden films and TV programming), you can probably conjure up an image of a stereotypical North American family on vacation mom in sunglasses and loud print sundress, kids in shorts and t-shirts and dad in Bermuda shorts and sandals (with black socks), with the family camera hanging by a strap around his neck He was the designated photographer — documentarian of family outings, events, and occasions Flash forward to 2004 and a lot has changed Not only are most of the new cameras being purchased digital, but they are more frequently found in mom's hands According to U.S research, women now buy more than half of all digital cameras sold and have replaced men as the chief family photographer Lifescape Solutions, a software company that has conducted two years of ethnographic research into this trend, describes members of this new demographic as "photo moms"

According to Lifescapes, the photo mom effect reaches beyond the purchase of a camera and capturing the images Like the photo dads of old, photo moms place importance on sharing images with family and friends, which can now be done more easily via email and the Web and new software tools Photo moms, however, more frequently use those images in creative projects — portraits and panorama prints scrapbooking, and t-shirts, for example They also print nearly one third of their digital photos, which Lifescapes says may explain a parallel trend the increased use of photography in home decor The researchers liken the trend of using family photos in creative projects to other informal methods of recording family memories of the past, like quilt making

Whether you're taking photos to document milestones, for fun, or you're a serious amateur shutter bug, this issue is all about photography, with reviews of cameras and tools and some helpful how-tos. Let us know what you think

— Megan Johnston, Editor

Letter of the Month

The prize this month goes to **Colin Geissler** "My favourite Web site isn't 'one' Web site, it is what happens when Web sites provide RSS/ATOM feeds in the past I would check out 10-plus of my favourite sites every day Which means going to each one individually and scrolling through what is new Instead, I have installed an RSS reader (like SharpReader, www.sharpreader net/) which downloads the new materials from all my favourite Web sites so I can read the in one place I use SharpReader to subscribe to the RSS feed of a Web site (like Slashdot, for example), then I let SharpReader run in my TaskTray and whenever new things are posted to Slashdot, I get notified — similar to how I am notified when new mail arrives in Outlook. So I guess my favourite Web site is my own personal Web site that I have created for myself by aggregating lots of other Web sites with just the information I want — including no banner or pop up ads"

Colin receives a **Foxda 6602 MP3 Player** with integrated digital voice recorder and FM Tuner We would like to thank Foxda for their support

KONICA MINOLTA

This month, in addition to feedback on the issue, tell us whether **you prefer digital or film photography and why** The winner will receive a **DiMage E223** digital camera, from **Konica Minolta**, for the best letter of the issue This 2 1 MP digital camera offers high quality images, carefree operation, and many added features such as a 3X optical zoom, and movie and audio capture Drop us a line at **letters@hubcanada.com**

Believe your first sense

Your eyes will tell you. Simply beautiful. The LG 20 series Flatron LCD monitor, winner of the prestigious iF Design Award for 2003. Stunning good looks on the outside. Inside, cutting-edge features, including LG's exclusive Lightview technology that lets you choose the best lighting for any ambient light condition.

LG, trust your eyes and our vision.

The LG 20 series Flatron LCD monitor in 21, 17 and 15 models

www.lg.ca

For those who like to touch up their digital pictures, it can be frustrating when the colours coming out of the printer don't match those carefully adjusted on the screen. Each monitor displays colours differently, which is why graphics professionals calibrate their monitors to produce better results (see "Digital Photography Tutorial," in the April issue of HUB, for calibration tips and tools). Now Pantone ColorVision is bringing monitor calibration home with ColorPlus, a more affordable option to its Spyder and SpyderPRO tools. The ColorPlus sensor connects to a Windows PC via USB and is attached to a CRT or LCD monitor while the software interface helps users adjust the screen colours and set the gamma, whitepoint, and luminance targets to industry standards. The result is more accurate output from photo printers, according to ColorVision. ColorPlus comes bundled with Adobe Photoshop Album Starter Edition and is available from ColorVision's Web site (www.colorvision.com) for $162*.

Pantone ColorVision ColorPlus

Play, stop, rewind, play, stop, rewind, play — need a serious voice recorder? Olympus (www.olympusamerica.com) has introduced the DS-2200, a compact digital voice recorder aimed at professional users, with a stereo microphone to better capture both sides of a conversation and both slow and fast playback modes for easier transcribing. The included 128 MB xD memory card holds up to four hours and 20 minutes of recording at the highest quality setting, according to the company. It also comes with a USB docking station for transferring files to a PC or Mac, and a remote control that doubles as a clip-on microphone. The file organization system allows for up to 199 files in each of five folders, which users browse on the recorder's backlit LCD screen. The DS-2200 carries an estimated street price of $399.95.

Olympus DS-2200 Digital Voice Recorder

Wanna play outside? If you like to run in the sun, Extech Instruments (www.extech.com) has a little gadget that might keep you from overheating. The HW30 HeatWatch, in addition to tracking time and laps, measures the temperature and relative humidity. It then uses that information to calculate the Heat Stress Index, a measure of how hot it feels with the temperature and humidity combined. Users can program a Heat Stress alarm to notify them when the index reaches a predetermined level. The stopwatch-style device also times to 1/100th of a second and counts up to 99 laps with fastest, slowest, and average lap time recall. The estimated street price is $53*.

Extech HW30 HeatWatch

Tablet PCs have always been about working on the run, so it shouldn't be a surprise that Viewsonic has wasted little time in adopting Intel's new PRO/Wireless 2200BG Centrino technology. The company has announced the launch of the V1250s, a convertible Tablet PC with integrated 802.11b, the most commonly used wireless networking protocol, and 802.11g, a newer, faster standard. The V1250s is also the lightest convertible tablet PC available with a 12-inch screen, according to Viewsonic, weighing in at 1.77 kg (3.9 lb.) with battery pack installed. It is expected to reach stores by the end of June, with estimated street prices starting at $2,549.

Digital Photography Tutorial 4

Paper chase

It's often difficult to tell, just by looking at an image on your computer monitor, whether it will print well on your inkjet printer Last month, I wrote about creating and assigning a profile for your computer monitor as a way of ensuring that the brightness and colour characteristics of your digital image are accurately portrayed on your screen

To close the loop you need to also assign a profile to your printer This can be tedious and time-consuming but fortunately, printer manufacturers have done a big chunk of the work for you already Somewhere in the printer dialogue box of most photo inkjet printers will be an area where you can select paper type — for example, glossy photo, matte photo, plain paper etc Paper types differ in a number of ways including the amount of light they reflect and the amount of ink they absorb In selecting a specific paper type, you are telling the printer to adjust the distribution and amount of ink to match the characteristics of that paper Unless you are into fine art photo printing, this is probably the only printer setting you ll need to adjust to obtain satisfying prints

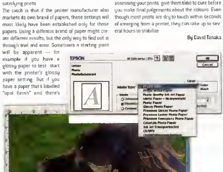
The catch is that if the printer manufacturer also markets its own brand of papers, these settings will most likely have been established only for those papers. Using a different brand of paper might create different results, but the only way to find out is through trial and error Sometimes a starting point will be apparent — for example if you have a glossy paper to test start with the printer's glossy paper setting But if you have a paper that s labelled "opal finish" and there's nothing within the printer setting to match it the only thing to do is make test prints to see which setting produces the best result

One might be tempted to conclude that the safest course of action is to eliminate the guesswork by using the manufacturer's recommended paper but that s hardly necessary I ve obtained excellent results using for example, Kodak paper in Canon printers or TDK paper in Epson printers Admittedly, I've also had total mismatches

In rare cases usually with papers aimed at advanced printmakers, a manufacturer will create a profile for specific printers such as higher end Epson and Canon photo printers Typically, you can download these profiles from the paper maker s Web site Some printers will allow you to manually adjust printer settings You might be able to change the printer's dpi (dots per inch) setting or invoke a more saturated printout by choosing a setting labelled "Vivid" or "Super realistic" or something similar Or there might be individual settings you can adjust

One small point to keep in mind when you are assessing your prints give them time to cure before you make final judgements about the colours Even though most prints are dry to touch within seconds of emerging from a printer, they can take up to several hours to stabilize

By David Tanaka



Which paper?

Photo inkjet papers are described according to surface finish and sometimes by thickness or weight. They will fall into three broad surface categories glossy (also called photo gloss, high gloss, premium gloss, etc) semi glossy (pearl lustre opal) and flat (matte velvet) Photo weight usually means that the paper has similar thickness to traditional photographic paper, however this is not consistent from one manufacturer to another

A friendlier way to learn Photoshop

Adobe Photoshop CS One-on-One
By Deke McClelland
O'Reilly ISBN 0 596-00618-7
$57 95, includes CD
Rating 4 out of 5

There is a vast library of help books that make up for Photoshop s relatively steep learning curve However many seem to be written for the graphic artist That s why as a digital photographer I like the approach Adobe Photoshop CS One on-One takes While it is not written just for photographers it organizes a lot of the material around the kinds of topics photographers need to know For example the first few chapters plunge right into brightness contrast and colour balance

One-on One is a course in a book reminiscent of Adobe s own Classroom in a Book training manuals Chapters are referred to as lessons and begin with objectives and end with quizzes But unlike the Adobe manual this volume uses full colour for its illustrations and friendlier names for its lesson titles The friendliness carries on into the lessons themselves A CD of videos is included that ties to the material in the lessons

KONICA MINOLTA

Superior Images in More Situations Than Ever

Introducing the new flagship model of the DiMAGE series, the DiMAGE A2.
For ultra-high 8 megapixel still shots or high-quality movies. With clear, natural colors from superior optics and exclusive image processing.
Plus many innovative features for unparalleled performance Anti-Shake, in particular, delivers far better results with handheld shooting, in dim lighting, at telephoto zoom and, and more. The Super Fine EVF sets a new level in clarity for electronic viewfinders.
And 3D AF provides a fast, accurate way to keep moving subjects in focus.
All in a dynamic package with a built-in 7x zoom lens, which keeps your camera bag small and your shooting options big.

DiMAGE A2

8 Megapixel CCD
For photo quality prints up to 11" x 14"

Anti-Shake
Take sharp images even in low light conditions

Super Fine EVF
Sharp viewfinder for detail and focus confirmation

3D AF
Follow moving subjects with focus tracking

High Quality Movies
Take Quick Time movies and email them to friends

7x Zoom (28-200 mm)
Greater versatility from true wide angle to telephoto

The essentials of imaging

Digital imaging and the pros

[illegible]

Al Gilbert

Photography is a family trade in the Gilbert line, a family business four generations strong thus far. "I was brought up in a darkroom where I got my hands in the developer and got brown fingernails [from the chemicals]," Al Gilbert says. "Today, the thrill of watching a print develop in the tray is gone." However, he points out that it's been replaced to an extent with the thrill of instant gratification that digital provides.

Gilbert shoots his digital work using an Olympus E-1 and E-100 but still favours more traditional film in certain circumstances. "I don't think the cameras of today can do large groups and give all of the individual detail in each face [like film can]. You'd need at least 14 MP [megapixels] for that," he says. Digital also has yet to match film's versatility in a spectrum of lighting conditions, he says. "There are some [digital] cameras that are good in the shadow and not so good in the light. When I was using lights and film, I knew exactly what I would get and could play with it a bit. With digital, you need to be spot on."

Gilbert says he came to be involved with Olympus and now uses its cameras for his digital work mostly because it was the only company that could provide answers to his digital questions. "You could tell them what you didn't like about their camera and they would fix it."

Digital photography still has its detractors, though they are fewer and farther between, but Gilbert isn't among them. "Five years ago, we had predicted that digital would take over," he says. "When I called some photo studios, they said digital would need 10 to 15 years [to mature] and damn it, they got rolled over."

Gilbert's craft has garnered him numerous awards, he is a Fellow of several international photographic societies and was awarded the Order of Canada in 1990.

A showing of four generations of Gilbert photography organized by Gilbert Studios, called Four Generations of Photography: From Glass Plate to Digital, starts May 4.

Paul Eekhoff photo is part of Art of Light and Shape exhibition.

Paul Eekhoff

Eekhoff graduated from Ryerson University in 1986 before spending six years as a photographer in Vancouver, then setting up his current studio in the Toronto area.

Today, Paul Eekhoff Studios [www.pauleekhoff.com] does commissioned shoots for various commercial entities, most recently shooting a catalogue of glass pieces for Robert Held Art Glass studios.

His digital photography dabblings began in earnest in 1997, manipulating images shot on film using Photoshop. "In 2000 I started doing my own scanning, then started shooting digitally ... in spring 2000."

The more striking images in his portfolio showcase a digital influence.

Eekhoff uses an Olympus E-1 hooked directly to an Apple laptop for all his digital work, to get a larger and more accurate image preview than a small LCD preview window can provide.

Film still has a place in Eekhoff's studios, with digital capture comprising about 50 per cent of his work. "Sometimes, if I want a narrow depth of field effect, I'll still use a larger format [film] camera to get that effect by swinging or tilting the lens," he says. "Shooting film is more an effect type of issue. We pick the tools that are going to suit the work. Is there a place for film? Yes, there is still a place for film I think."

Whether shooting digital or film, fine art photographers agree that the "digital darkroom," while a powerful tool, doesn't take the place of preparation before the shutter clicks. "I'm still sort of an old school photographer, in that I still like to get as much of the image in camera as I can," Eekhoff says.

Much of Eekhoff's work goes to stock image agency Masterfile [www.masterfile.com], where it is sold to publications, commercial artists, and ad agencies.

His eclectic style blends traditional still life, montage, darkroom [digital and otherwise] techniques, and effects.

Big Shots

Hub looks at quartet of new 8 MP digital cameras

Despite the fact that digital cameras with a top resolution of 3 to 5 MP (megapixels) will more than meet the needs of most amateur photographers, there will always be the enthusiast who wants more, more, more! And, now that a new 8 MP sensor has been introduced, manufacturers are meeting that demand with 8 MP models that are friendlier to the pocketbook. If you're looking for high-quality images but don't have a professional photographer's hardware budget, these models are worth a look.

Canon PowerShot Pro1

www.canon.ca

Estimated retail price: $1,850

Canon's PowerShot Pro1 is one of the more expensive 8 MP models and it's also a slightly quirky affair. As with other high end Canon cameras, picture quality is excellent, and it offers a lot of manual control, but there are a few things worth mentioning.

First, the zoom is controlled by a ring around the lens itself. However, it's servo-controlled, which means that even though it's closer to the zoom on an analogue lens system, the control isn't as fine. When you move the ring, you can actually see the lens moving forward in blocky chunks instead of smoothly and there's still a tiny lag time between movement of the ring and the servo kicking in. The same ring is also used for manual focus; you hold down the MF button and spin the ring, and a magnification window pops up in the middle of the LCD to allow for more accurate focusing.

The exposure is controlled with a jog wheel just behind the shutter; you change the aperture by pressing down while spinning the same wheel, which is awkward and may result in changing the exposure at the same time. The angle of the jog wheel also makes it a bit awkward to use, especially if you need to change settings quickly while trying to hold the camera still.

The camera uses LCDs for both the rear viewfinder and the eyepiece. The eyepiece screen is high-resolution, which will make it easier to use it in conjunction with manual focus. The rear viewfinder flips out 180 degrees from the body and spins through 270 degrees for great flexibility while shooting, and protection of the screen against the body of the camera when it's not in use.

In the end, the PowerShot Pro1 is a bit of a head scratcher. It gives you great control over your images and is in many ways a beautiful piece of technology, but its higher price really makes you wish Canon had put a bit more work into zoom and aperture controls.

Konica Minolta Dimage A2

www.konicaminolta.ca

Estimated price. $1,599

Following a merger with Konica, Minolta's Dimage line of digital cameras continues to grow. The Dimage A2 is an update of the A1 model, sporting a near identical design, but with better specs. The A2 features an astounding 8 MP resolution and Anti-Shake technology, giving you image stabilization at the touch of a button.

As with the A1, one of the nicest features with the A2 is the 7x optical zoom, operated manually by cranking the lens with your hand — just as you would with an old zoom lens attachment. This means instant control over the zoom, instead of waiting for the servo, and it saves on battery power. Manual focus control is via a ring near the body of the camera, but it's not nearly as responsive. A macro tab locks your lens in place for close ups.

As with previous high end Dimage models, the A2 has an LCD viewfinder that automatically switches to the high-res LCD screen in the eyepiece as your eye moves towards it. Both viewfinders can tilt 90 degrees upward. The camera ships in "aperture priority" mode by default, but you can also override it using the menu.

The Dimage A2 features a wide variety of settings, accessible through a number of buttons and wheels. It's a bit intimidating but it gives you fantastic control over your images.

Nikon Coolpix 8700

www.nikon.ca

Estimated price. $1,400

Of all of the new 8 MP cameras, Nikon's Coolpix was, to our eyes, the most striking in appearance. It looked sleek, efficient, andE well, cool.

Some new high resolution cameras have so many switches, dials, and buttons that you feel like you're piloting an aircraft. The Nikon, however, eliminates much of the complexity by putting most of the control into a single jog wheel that changes function based on the other buttons you're pressing. The tradeoff is spending some time getting a feel for the menu system.

One weird design issue: the on/off switch appears around the outside of the shutter button, which would be efficient if digital photographers weren't already so gosh-darned used to finding the zoom control in that same location. On the Coolpix 8700, the zoom is controlled by a tilting button on the rear of the camera. A bit of practice may be necessary to keep you from turning the camera off when you really wanted to zoom in.

As with most of the new high resolution models, the Coolpix 8700 uses an LCD monitor for both the rear viewfinder and inside the eyepiece. Because the eyepiece resolution is comparatively low, you'll want to use the rear viewfinder when possible, even more so because it can flip out 180 degrees from the body and spins through 270 degrees; this allows great flexibility when shooting, and also gives you the option of protecting the viewscreen against the body when the camera is not in use.

Olympus C-8080 Wide Zoom

www.olympus.com

Estimated price. $1,400

One of the biggest problems with any digital camera is that spontaneity can be hampered when you have to wait several seconds for your camera to power up before you can take a shot. Olympus' new 8 MP C-8080, though, can go from off to first capture in two to three seconds, depending on whether auto-focus is on. Pretty impressive!

Like other models in Olympus' C-series, the C-8080 has a mode dial on top with a customizable My Mode setting, a jog wheel that controls multiple settings (flash, aperture, shutter, more), and a fairly easy-to use menu system. It also has a customizable button beside the mode dial, allowing you to choose one option that you use regularly, so you won't have to drill

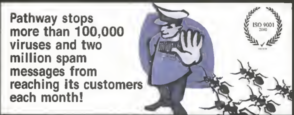
* [illegible]



Pathway stops more than 100,000 viruses and two million spam messages from reaching its customers each month!

Every month thousands of Canadian Internet users fall victim to viruses and are inundated with spam. Pathway clients, however, enjoy the safety, reliability and exceptional service provided by the only ISO 9001 2000 certified ISP in Canada. Call today to enroll for the Pathway experience – which even other ISPs talk about enviously!

FOR YOUR HOME

SIGNA MEANS QUALITY

Quality Products, Service, and people

11th YEAR OF EXCELLENCE

Five Reasons to Choose Signa

1) Ethics — We sell only what we believe will give you the best computing experience
2) We're a complete solutions computer company — sales, service, upgrades, repairs, trade-ins, and on-site service
3) We ship exactly what you order — no hidden substitutions, no last-minute surprises!
4) We stock leading-edge components for people that demand the best now!
5) You'll deal with people that use many of the products they sell, are quite knowledgeable and enjoy what they do.

We're Proud of Our Staff!

Meet Jack. He's one of our experts He is an A+ Professional with Microsoft Certification, and can take care of all your repair and upgrade needs quickly and efficiently!

Dear Customers,

Due to our expansion , we need a bigger location , we are going to build our new home at 8355 Woodbine Ave. Markham. At the time being, our retail shop will be closed at the end of March for few months (re-open around August/September), we still take phone order and will ship to anywhere in Canada .

Wholesale :
Please call to have a wholesale catalog send it to you

ECS Notebook Series

G550

- Mobile Intel Celeron 2.4GHz processor
- 256MB DDR memory
- 20GB Hard disk drive
- 15" SXGA+ TFT display
- DVD+CD-RW Combo
- Li-Ion battery for extended usage
- 802.11b wireless (optional)

G553

- Intel Pentium-M processor or Intel Dothan processor with Intel Enhanced Speedstep® Technology
- Support DDR up to 400MHz
- 15" SXGA+ TFT display
- Sharing Memory Archit 64MB m
- DVD+CD-RW Combo
- Li-Ion battery life more than 4 hours
- 10/100 Base-T LAN on board

G732

- Intel Pentium 4 processor up to 533MHz FSB with Intel Hyper Threading Technology
- Support DDR up to 333MHz
- 15" SXGA+ TFT display w/ATI
- Mobility Radeon 9000 64MB video
- DVD+CD-RW Combo (DVD-RW optional)
- 4x USB2.0 / 1x Firewire ports
- Li-Ion battery for extended usage
- 802.11b wireless (optional)

G736

- Intel Pentium 4 processor up to 800MHz FSB with Intel Hyper Threading Technology
- Support DDR up to 400MHz
- 15" SXGA+ TFT display w/ATI Mobility Radeon 9600 128MB video
- DVD+CD-RW Combo (DVD-RW optional)
- 4x USB2.0 / 1x Firewire ports
- Li-Ion battery for extended usage
- 802.11b wireless

ECS Mainboard Solutions

ECS 755-A2 Athlon 64 Mainboard

- Socket 754 for AMD K8 Athlon 64 processor with Hyper Transport CPU Interface
- SiS 755 & 964 chipset
- Support DDR upto 400MHz (2GB Max)
- AGP8X / 5xPCI / 1xCNR
- 2xSerial ATA Channels
- 6 Channel Audio Codec
- 10/100 Ethernet LAN

ECS 741GX-M Athlon XP Mainboard

- Socket [illegible] Athlon XP [illegible] Athlon/[illegible]
- SiS 741GX & 964L chipset
- Integrated SiS Mirage [illegible] 3D graphics
- Support DDR up to 333 (2GB max)
- AGP8X / 3x PCI / 1x CNR
- 6-Channel Audio Codec
- 10/100 Ethernet LAN

ECS 848P-A Pentium4 Mainboard

- Intel Pentium 4 processor up to 800MHz FSB with Intel Hyper-Threading Technology
- Intel 848P & ICH5 chipset
- Support DDR up to 400MHz (2GB max.)
- AGP8X / 5x PCI / 1x CNR
- 2x Serial-ATA channels
- 6-Channel Audio Codec
- 10/100 Ethernet LAN

ECS 865PE-A Pentium4 Mainboard

- Intel Pentium 4 processor up to 800MHz FSB with Intel Hyper-Threading Technology
- Intel 865PE & ICH5 chipset
- Support Dualchannel DDR up to 400MHz (4GB max.)
- AGP8X / 5x PCI
- 2x Serial-ATA channels
- 6-Channel Audio Codec
- 10/100 Ethernet LAN

EZ-Buddie²

ECS EZ-Buddie 2 combines personal entertainment center with powerful computing system in compact package ... with FSB 800 MHz 2.4 - 3.2GHz Pentium 4 Hyper Threading technology and up to 2GB dual channel DDR 400/333/266 MHz memory

G900

- Intel Pentium 4 (Northwood/Prescott) processor up to 3.2GHz with HT technology
- Supports DDR up to 400MHz
- 17" wide-screen TFT display w/ATI Mobility Radeon 9700 128MB video
- FULL multi-media functions: TV Tuner, DVD/RW, 5.1channel audio with 5 speakers & subwoofer
- [illegible] latest technology: RAID, Gigabit LAN, Flash card reader, wireless 802.11b/g (optional)

Broadcast your mp3's through any FM radio without wires! A world's first, the Muro MR-100 is the only mp3 player currently available with the ability to share your music through any FM radio in your home, car or office. Brought to you in Canada exclusively through Digitec Trading Inc. (www.digitec.tv) this versatile multi-format digital device plays mp3's, WMA's just like many other players. Its hat-trick is the built-in FM tuner, Voice Recorder, FM transmitter and USB Storage all in one svelte candy-bar weight with an included Ni-Mh rechargeable battery. This battery provides over 10 hours of playing time on the go.

A line-in recorder allows you to connect directly to any CD or mp3 player to add new tones without the need to use a PC. Models come in 128/256/512MB capacities and all are firmware upgradeable. It's available now starting at a MSRP of $199

For more information, please visit www.digitec.tv or call 905-415-3566

Bell
Making it simple™

¹Download speed of Sympatico High Speed Internet service has increased to up to 3Mbps from up to 1.5Mbps for most subscribers in early 2004. Some exceptions apply. Results and online speeds may vary with Internet traffic, server or other factors. ††Firewall and Antivirus services, which include Parental Control service, are provided in collaboration with Zero-Knowledge Systems Inc. and are available only to Bell Sympatico members for a monthly fee (currently $5.95/mo. per service). No service can provide absolute protection. *Offer ends May 31, 2004, and is available only to new Sympatico High Speed and new Antivirus and/or Firewall subscribers. Services are not available in all areas and are subject to the terms and conditions of the applicable service agreement, available at www.agreements.sympatico.ca. Regular monthly rate for Sympatico High Speed service (currently $44.95) applies in month four. Antivirus or Firewall service, including Parental Control service, terminates at the end of the 3-month period. Rates are subject to change and exclude applicable taxes. Offer subject to change without notice and cannot be combined with any other Sympatico, Antivirus and/or Firewall offer. Other conditions and restrictions apply. **Limited time offer; see www.bell.ca/sympatico for details. Sympatico is a trade-mark of Bell Canada.

® Official Mark of the Canadian Olympic Committee

down through menus each time you want to use it The camera features a wide-angle lens with a fairly responsive 5x optical zoom controlled by a lever behind the shutter The C 8080 has slots for both xD and CompactFlash memory and allows you switch between the two with the touch of a button

Of the 8 MP models we've had a chance to look at the C 8080 is definitely the heaviest of the bunch and one of the largest The grip is quite comfortable overall, though there are a few annoyances the right-hand strap mount is in an awkward location that occasionally interferes with access to the mode dial, and the barrel of the lens has a notched ring that looks like it should be a zoom or focus ring but is actually strictly there for decoration

Konica Minolta Dimage A2

Olympus C-8080 Wide Zoom

Nikon Coolpix 8700

Canon PowerShot Pro1

Do I need 8 MP?

Whenever a new technology hits the shelves a lot of people second-guess themselves when they start shopping They may have been planning to buy a 3 MP camera, but worry they'll be left behind if they don't go for the brand new thing

If you only want to share images on the Web and via email, a 2 or 3 MP camera is more than enough — you'll need to shrink images down at that resolution unless you're regularly printing them out as 5x7-inch prints If you plan to print high-quality 8x10-inch images, you'll want at least a 3 MP or even a 5 MP camera. You'll only need 8 MP if you want professional-quality images for prints larger than 8x10 inches

If you don't plan to print 11x17 inch photos on a regular basis, chances are you don't need an 8 MP camera, especially at the current premium pricing

Shopping tip

A recent trend to note is that many manufacturers no longer include memory cards with their higher-end digital cameras It makes sense because in the past the standard cards were so small (16 MB, for example) as to be almost useless — and would be even more so with a higher resolution camera This does mean, however, that you'll want to leave room in your budget for a memory card when buying a high-res camera

Serious 6 MP

Nikon takes its shot at DSLR

People who take photography seriously want the best equipment available, and lens quality is perhaps the most important equipment element Until recently, a common complaint about digital cameras among serious amateurs was their small lenses These photographers essentially wanted digital versions of their single lens reflex [SLR] film cameras While digital SLRs [DSLR) were available for pros, their high prices put them out of range for all but the most well heeled amateur As with a lot of technologies, though, DSLR prices have plummeted and are now within reach of the serious hobbyist

On the heels of Canon's DSLR, the Digital Rebel {reviewed in HUB November 2003}, Nikon has released the D70 This 6 1 MP DSLR retails for $1,889 for the kit with a lens and $1 499 for the camera body only At nearly $500 more than the Rebel, you wouldn't think these cameras were direct competitors In some ways they aren't both Canon and Nikon want film photographers who've invested in their brand of lenses to stay in their respective "family" when they go digital

The Nikon D70 is a more professional looking camera that is comfortable to hold and operate A single wheel is used to switch between pre programmed modes {Auto, Portrait, Landscape, Close Up, Sports, or Night Landscape, for example], or full Manual control Two well placed data wheels on both front and back control aperture and shutter speed in any of the manual modes

In the field it performs brilliantly. The auto focus system is quick and accurate and the very bright auto focus assist light means you can focus perfectly even in dark shooting situations An innovation I really loved was in the lens after the auto focus sets you can still adjust the focus a bit without having to go into manual focus mode This allows you to quickly shift the focus from foreground to background which works very well in fluid situations like sporting events

The quickness of this camera is quite staggering In rapid fire mode [JPEG normal/large setting with a 256 MB CF card] Nikon claims you can take up to 144 shots at three per second It appeared to work as advertised, although I gave up shooting pictures after about 80 images No camera lag was evident in manual focus mode [there is usually some when in auto focus mode] The shutter speed ranges from 30 seconds to 1/8,000 of a second The pop-up flash works with shutter speeds of up to 1/500 of a second, which is great for use as fill flash when shooting outdoors.

Although the camera runs on a proprietary Lithium ion [Li-ion] battery and there is no large battery pack on the accessory horizon, it has a very good power management system I charged it when I got the test camera, used it for a two week period taking about 400 shots, and the battery level still showed it as fully powered Nikon says it can capture up to 2 000 images on a single charge

The lens that comes with the kit is a standout It is wider, longer, and brighter than the one included with the Rebel kit. This 18 70mm lens [which translates into a 27 105mm in a 35mm film camera] is designed to be used with Nikon's digital cameras and can't be used with film cameras However, most Nikon compatible lenses can be used with this camera I tested several auto focus and manual focus lenses from various manufacturers, and they all worked splendidly on this camera

The images captured with the D70 are outstanding Theres really no comparison between them and images taken with a 6 MP point and-shoot camera Colours are better and the images sharper with less distortion.

The D70 is worth the price This is simply a great camera It has more professional features, such as the high speed flash sync, and is a tad easier to use than the Canon Rebel. If you have any or many Nikon lenses in your equipment bag, you'll want to consider the D70 [Canon fans will most likely go for the Digital Rebel] If you are looking for a DSLR irrespective of marques, you might be willing to part with the extra $500 after playing around with this camera

By Nester Guia

Rebel reduced

The camera that set the DSLR world upside down last fall, Canon's Digital Rebel has been reduced in price by $200 The kit, with an 18 55mm lens (which translates to a 29 88mm lens in a 35mm film camera) costs $1 399 while the body only retails for $1 199 00 It is a great camera that won't disappoint

New tools for sharing photos online

There's little point in capturing digital photos without an efficient and fun means to store and share them. With that in mind, we looked at some online photo sharing/showing services, designed to get photos out of the digital shoebox (read: your hard drive) and into the spotlight.

SmugMug

Madgode Inc., www.smugmug.com

Yearly rate	**$40* to $133***
Good	**Print-resolution images, easy to view galleries; huge traffic allowances**
Bad	**Limited upload batches, potentially long upload times, few "fun" customizations**

With the glut of free online photo albums, why would you pay for a service like SmugMug? Free services are fine, but be prepared for tight bandwidth and space restrictions. For more flexibility, expect to cough up.

SmugMug is a scalable service where invited visitors can view and download images of up to 8 MB each. Galleries are simple, attractive, and can be grouped however you want.

Visitors can view smaller images if they have a small monitor or slow connection. They can also order high-resolution prints of images directly from the site (on their dime, of course). Pro users, at the highest service level, can up the price of prints and share in the profit too (handy for professional photographers).

The simple and effective Web interface includes drag-and-drop bulk uploading, basic image editing, caption writing, gallery creation, and more.

The biggest problem in a test of the Pro level service was slow uploading as a result of caps imposed by high speed access providers. An entire gallery containing 325 MB worth of pictures took more than two hours to upload and had to be completed in four batches due to SmugMug's own uploading limits.

SmugMug offers various levels of service, from $40 to $133 annually.

PiXPO

How2Share Technologies Inc., www.pixpo.com

Price	**$39.95**
Good	**PC-based hosting, clean galleries, content filtering/blocking**
Bad.	**Software required to view galleries, no Web publishing options; requires that software and host computer be on for gallery uptime**

Peer-to-peer (P2P) networking has had something of a bad rap as the technology behind music file sharing. However, P2P and illegal file swapping aren't mutually inclusive.

How2Share Technologies' PiXPO uses P2P to connect users to photo albums and galleries hosted on your PC without need of a Web site or server. As long as PiXPO is running (in the fore or background) and remote users have permission to peruse your photos, created galleries are viewable.

PiXPO uses a "pull image" technology, which allows users to pull individual pictures or galleries, where other non-Web interface galleries require the album owner to push images to people on their contact list.

A search function allows users to troll public galleries, but private photo sharing is where the software will likely see most of its use. Invitees can browse viewable galleries as they are posted after they download and install PiXPO. This eliminates the need to send more invitations as new pictures are put online and gives viewers more control over the experience.

PiXPO doesn't incorporate any image manipulation beyond the ability to rotate pictures into its interface. So shutterbugs will have to crop, size and otherwise adjust images before offering them up for mass consumption.

Picasa / Hello

Picasa Inc., www.lifescapeinc.com, www.hello.com

Price	**$38* / free**
Good:	**Fun chat interface, great personal browsing tool; Web uploading function**
Bad:	**Gallery owners must take active role in sharing; Picasa all but required for Hello to be useful in sharing**

Picasa isn't so much about photo sharing as it is photo organizing. However, by downloading Hello, a free application that functions alone but integrates with Picasa, users can chat with other Hello users to share pictures and guide others through chat slideshows.

Picasa's interface is reminiscent of iPhoto. Upon installing the software, it scours either your entire Windows-based computer or selected folders (i.e. My Photos). The time it takes to scan for photos varies with system specs and number of photos.

The highly visual interface is exactly what we'd hope for in photo organization software, and having all images in one place, grouped by year then name in the main filmstrip view window, gives a good opportunity to deal with image bloat. In the main window, users have access to some basic image correction tools.

Sharing photos with friends and family using Hello (the free part) is actually quite rewarding. The import process is quick and easy, but becomes a lot easier and more visual with Picasa (the not-free part) installed.

Hello's chat functions in much the same way as other chat clients, though with some photo-specific accoutrements. For example, typing a keyword then hitting CTRL+G automatically uses Google's image search to pull the top 20 hits directly into the chat.

Either party in the chat can lead, picking photos to chat about while the other client follows along.

LifeLine, Final Fantasy XI bring innovation to console gaming

LifeLine

Price $59 99 ESRB rating: Mature

Publisher Konami Developer Sony Computer Entertainment

The idea behind Konami's LifeLine is novel Rather than just control the action on screen using a control pad, gamers don a USB ear piece and microphone to bark orders at Rio, the game's heroine

What we get is akin to a point and click adventure using the same general principles like item gathering puzzle solving, and exploring, with the addition of fighting sequences The difference (and sometimes difficulty) is that instead of pointing and clicking gamers speak into a microphone

In the year 2029, the nameless, faceless lead character and his girlfriend Naomi are attending the opening of the first space hotel when monsters decide to crash the party As the game's unseen protagonist, gamers make contact with another survivor from the attacks, Rio, a waitress at the hotel Catch is, you're locked in a control room and must tell Rio exactly what to do, watching her through the hotel's surveillance cameras and doing most of the thinking.

LifeLine carries on at a much slower pace than console gamers may be used to Much of the game's challenge is in trying to figure out what words to use to get your point across to Rio For example, how do you tell Rio to open a small room safe when it looks like a book resting on a bedside table? Similarly, being set in the future, how do we tell her to examine a space station gadget in the year 2029 that we don't have names for yet?

For the most part, voice recognition works very well and the game recognizes more than 5,000 words and 100,000 phrases Problems do arise with Rio getting confused with certain words though, and the game requires that players adapt to its idiosyncrasies, not vice versa

If nothing else, LifeLine is a chance for gamers to shout at their television and actually get results for once

Final Fantasy XI

Price: $139 99 (with 40 GB hard drive) ESRB rating. Teen "Experience may change during online play"

Publisher/Developer Square Enix

Notable for a few reasons, Final Fantasy XI ships with the recently introduced 40 GB PS2 hard drive and is among the first console games deserving of the cumbersome acronym MMORPG (massively multiplayer online role playing game)

MMORPGs in general are plagued with early release bugs and general confusion as players figure out how to play the game and adapt it to their own idea of fun. As a result, game companies scramble to keep up while fixing bugs and downtime unforeseen in beta tests when thousands or tens of thousands of users log on at the same time

FFXI is somewhat exempt from this rule, as it has been extensively play-tested by Japanese gamers who got their hands on it last year That said, North American gamers complain of problems overcoming the learning curve while some more established gamers use them as target practice

Problems aside, FFXI is an impressive feat and an excellent adaptation for those more interested in playing this type of game while seated on the couch, as opposed to at a desk with the PC version

Console and PC gamers inhabit the same worlds, a definite first in gaming, though graphics in the PS2 version are understandably scaled back when compared with the PC incarnation

After overcoming the significant learning curve, gamers will find a classic Final Fantasy-style story line It may take the more casual among us the duration of the one month free trial to get into the swing of things but there is so much to see and do, so many paths to follow and so many interesting characters (of both the artificial intelligence and living breathing persuasions) to make the effort worthwhile Game commerce and social structure are well thought out too.

Combined with the unpredictability of an online multiplayer game, which makes for a much more social experience, Square Enix has effectively created the hardcore Final Fantasy fan's longstanding dream

Those willing to cough up the steep asking price of the game — along with the US$12 95 monthly charge and various add-on charges like US$1 for a second character or enhanced email functions — will find a first, a well thought out and infinitely playable console MMORPG

By Andrew Moore-Crispin

Microsoft®
Windows^xp
Tablet PC Edition

Twenty-eight years of computer technology and we're back to the drawing board.

Sometimes there is nothing more persuasive, nothing clearer, than the scrawl of freehand. That said, it is inconceivable to go without the functionality of a PC. Enter the Tablet PC. Made possible by Microsoft®, their partners and the innovation of Microsoft® Windows® XP Tablet PC Edition operating system, the Tablet PC marries the freedom of the pen and paper with the power of a PC. So no matter how you want to make your mark, your mark is made into something more. For more information, visit **www.microsoft.ca/tabletpc**

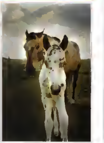
APRIL PHOTO SPREE WINNER

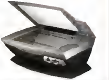
THE WINNER:

GRAND PRIZE

Congratulations go to Peter Marlia, from Calgary, Alberta, whose picture "Nice To Meet You" won the "Spring" challenge, in our bi-monthly photo spree contest.

He used a Canon 300d camera to capture the image and Photoshop CS software (curves, unsharp mask, dodge/burn, save for web to resize). For this image Peter wins a Lexmark P3150 All-In-One Photo Printer.





LEXMARK P3150 ALL-IN-ONE

HUB PRESENTS ITS Bi-Monthly PHOTO SPREE

DIGITAL LIVING

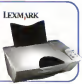
THE CHALLENGE: Sports

WIN!

LEXMARK X5250 ALL-IN-ONE

The all-new Lexmark X5250 All-In-One combines photo-quality printing, high-resolution scanning and colour copying in one compact device. Designed for Windows and Mac users, the X5250 offers borderless and six-colour photo printing capabilities, the fastest colour print speeds in its class, a 48-bit flatbed colour scanner, and one-touch photo copying — perfect for all your creative digital imaging needs.

LEXMARK



THE RULES: You must use a digital camera to capture the subject. Work can be submitted via email (contest@hubcanada.com). Accompanying your photo should be the make and model of the camera you used, the names of any software you used to modify the image and, if possible, the f/stop and shutter speed you used to take the photo.

Submit your photographs, along with the information from the form below by June 11th 2004. You can submit up to three photographs, all of which must be accompanied by a submission form. Entries must be submitted via email. Files should be no bigger than 500 KB and no smaller that 300 KB. One photo per email.

Contest Rules: Prizes must be claimed by July, 11 2004. Winners must provide valid identification upon claiming prize. The prizes awarded are not transferable and cannot be redeemed for cash. To enter and to be eligible to win, persons must be residents of Canada, and not employees or be domiciled with an employee of CCF Media, its affiliate companies or advertising or promotional agencies. The winners will be selected by HUB on June 11, 2004 from among all eligible entries received on or before contest close date. Winners will be contacted by telephone or email. In the event that they cannot be contacted within the first week following the contest another entrant will be selected. All entries become the property of HUB and may be used in subsequent advertisements for the contest. All entries must be submitted by their artist and must be original work.

HUB's Photo Spree contest form. All submissions must contain this information. Send to contest@hubcanada.com

Advertorial

WHAT TO LOOK FOR IN A DIGITAL CAMERA

Digital photography is fast replacing traditional photography and it's not surprising why. Some reasons include immediacy of being able to see your picture, flexibility in editing, and ease of being able to email pictures to family and friends. Digital cameras in the long run are generally more cost-efficient because there's no film or processing involved. If you're thinking of going digital, here are a few things to consider:

Fast start-up time

The start-up time in a digital camera is of utmost importance, and it's something to keep in mind when shopping. Even the difference of half a second could mean missing out on that spontaneous moment.

Good image quality

As a rule of thumb the more megapixels a digital camera has, the better the quality of the image. But how much resolution do you really need? The answer depends on your own needs.

To determine this, you need to figure out what you intend to do with the digital pictures you take.

Here's a guide to help you:

Email or post photos on website	Less than 0.9 Megapixels
4" x 6" (Low-quality prints)	1.0 - 1.9 Megapixels
4" x 6" (Quality prints)	2.0 - 2.9 Megapixels
5" x 7" (Quality prints)	3.0 - 3.9 Megapixels
8" x 10" (Quality prints)	4.0 - 5.9 Megapixels
Larger than 8" x 10" (Quality prints)	6.0 + Megapixels

If you intend to print your pictures, choose a digital camera with at least 3 megapixels. Remember the larger the prints you want, the higher the resolution you require.

Zoom lens

Optical Zoom vs. Digital Zoom

Digital cameras can have two types of zoom associated with them: optical and digital zoom. What you should focus on when shopping is the optical zoom. Optical zoom uses a combination of lenses to focus in on a small area and augment the image quality. Digital zooms don't offer any additional image detail. However it's important to note that a higher optical zoom usually means a higher price for the digital camera.

Fast shutter response

If you intend to capture fast moving action shots, fast shutter response is crucial. Shutter response is the time lag between pressing the shutter and the camera actually taking the shot. The faster the shutter response, the more likely you will capture the decisive moment. Pro-sumer digital cameras usually have a better shutter response than lower end consumer ones.

Compatibility with your computer

Most people consider digital cameras, because of the ease of sharing photos via email and posting on the web. Although most digital cameras come with the capability to transfer photos to a computer, it's important to check your computer's capabilities to see which interface it supports, before purchasing.

Additional features

Some digital cameras also come with extra bells and whistles, such as, movie and audio recording. Shooting these short movies is a lot of fun, but don't think of a digital camera as a replacement for your camcorder. A dual memory-card slot is another excellent feature to consider. It allows the user different card formats, which can aid compatibility with other devices such as the PDAs, printers and personal computers.

Konica Minolta's DiMAGE digital cameras are easy to use, versatile and competitively priced. For more details, go to www.konicaminolta.ca

CAUTION:
Wear gloves while handling.
Your palms may sweat with excitement.

DiMAGE A2
The next generation SLR-type camera with all the bells and whistles to make digital photography fun.
Telephoto and wide angle conversion lens • 8 Megapixels
World's fastest AF speed in its class • Anti-shake HQ for movies
Super-fast shutter speed (1/16,000) • World's first VGA-size EVF

DiMAGE G400
Perfect for travel. Lets you capture breathtaking landscapes without the risk of running out of memory.
4.0 Megapixels • Fast 0.7 second start-up
Dual memory card-slot • Rapid AF
Extended movie recording

DiMAGE Z2
The DiMAGE Z2 is a must have for enthusiasts who want a camera that's convenient, fun and reliable. Perfect for sports and action photography.
4.0 Megapixels • Mega-zoom (10X optical and 4X digital)
Progressive Capture • Improved Rapid AF
High-quality VGA Movie

DiMAGE G500
Designed for life, the DiMAGE G500 keeps up with you wherever you go.
5 Megapixels • Fast 1.3 second start-up
3x aspheric zoom lens • Dual memory-card slot
Telephoto and wide angle conversion lens

Change the way you think about digital photography. The latest DiMAGE digital camera line is a tribute to Konica Minolta's commitment to innovation, lens technology and image quality. From the fun easy-to-use DiMAGE Z2, to the next generation SLR-type DiMAGE A2, these digital cameras are redefining style and photography. Imagine the possibilities with DiMAGE.

TV to go

If you already find those loud-mouthed weenies on the bus annoying with their gadget fiddling, just wait — it's about to get worse. Soon they'll be cheering their way through David Suzuki's Nature of Things. "New hair cut Dave! Sweet!"

The latest technology vision coming to a geek near you is a tiny little digital video player with a tiny little screen. Soon he will be available to grab his favourite TV show, recorded at home, and plop it onto a mobile device for viewing on the way to work.

Microsoft is getting into this technology so it's not just a passing fad. Bill Gates and the Redmond kids have invented the Portable Media Center, which was unveiled at the Consumer Electronics Show in January. It's a portable gadget that can grab recorded TV shows from a PC so you can take them with you. The gadget can also play digital music files and show pictures. It's kind of a mobile multi media device.

A Portable Media Center player from Creative

But there's a catch: the gadget is designed to work with computers that have Microsoft Windows XP Media Center Edition loaded on them. That's a variant of XP that is designed to bring TV watching and recording, among other multimedia functions, to the computer.

Frankly, I don't see much utility in this approach. We don't watch television on our computers, yet. That said, I did mess around with one of Hewlett Packard's PCs that runs the XP Media Center Edition software. For weeks the HP PC sat in my living room where my TV used to be and people kept asking me "What happened to your TV?" And I'd say "I replaced it with that." And I'd point to the HP computer. They'd look at me like I had just shaved my cat for fun. My female friends were especially dismayed. "God, I'd never put THAT in my living room. It's so ugly."

Now, the HP system is not really that ugly. It's quite handsome as PCs go. But point taken — it was weird to have a PC as the living room's centrepiece. And its 17-inch LCD screen wasn't crowd friendly when several people wanted to watch very important PBS documentaries together.

What I really want to be able to take with me are shows from my TV, not my computer. Still James Barnard, Microsoft's product manager for Portable Media Center, justified the PC-centric approach this way: "More and more people are using the PC as hub for home entertainment and they want to share that with other devices."

You may disagree with this approach, but there are technologies under development that will make TV watching PC centric.

First, you can bet your snack food budget that there will be recordable TV functions built into the next version of Windows (codenamed Longhorn), which is due out in 2006 or 2007.

Plus, at CES in January, Microsoft also announced a device called a Windows Media Center Extender that will pair your computer with your TV, pushing content from one to the other. The company also showed off an HP built TV that had an integrated extender.

The reality is the PC will be in your TV and your TV can be your PC — probably via a network connection — and by the end of the decade I am willing to bet that your TV will be any one of a series of flat panel screens fed TV signals by a computer.

One approach to this caught my attention recently. Hy-Tek Manufacturing has created a device called the Tek Panel. It's a 30 or 37 inch LCD TV that is actually a computer with a TV tuner card that runs Windows XP Pro. With its $8,500 price tag it'll make your accountant run screaming into the night, but the point is it works as either device today, yet it's designed for the living room. It doesn't do either role well. In fact, it uses an off the shelf ATI video card kit for its TV technology and the software is kind of shaved-cat retarded. Hy-Tek should have used Windows XP Media Center Edition. However, I bet it will once Microsoft rolls out its plan to commandeer your TV this fall, when the Portable Media Center devices and the Media Center Extender launch.

Mark my words: that annoying Suzuki cheering weenie will be on your bus yet. But let's face it, that weenie will probably be you.

Andy Walker spends a lot of time in Silicon Valley, though you can usually find him in Toronto with his cat Roe and house full of gadgets.
